FIES Professional Flatbed Systems

One machine, countless possibilities, introducing the most versatile flatbed cutting system ever.

With the F Series, Summa offers a cutting product line based on 25 years of expertise building the worlds very best cutting plotters. These advanced engineered flatbed cutting tables are capable of cutting sheet and rigid materials as well as roll stock. Up to three tools can be inserted at one time on the multi-module tool holder. Changing tools is quick and easy. Automatic tool recognition, combined with digital and mechanical depth and / or pressure control, ensures precision cutting on a wide variety of materials.

The F Series base unit comes equipped as standard with the drag knife modules and Summa's revolutionary optical camera marker recognition system for unbeatable contour cutting accuracy. Multiple material-handling options assure optimal efficiency whether cutting printed flexible or rigid substrates. An ever increasing arsenal of optional add-ons further expand the capabilities of the F Series, allowing for a custom tailored machine perfectly matched to fit your specific workflow.

Conveyor System

This optional conveyor system and media support rollers allow the cutting / creasing / annotating of large lengths of flexible material to large production runs.

Pneumatic Pack

Optional pneumatically-driven media advance clamps hold the material down while pulling it forward in order to work continuously in panels or multiple jobs.

Multi-function Head

The multi-function head holds up to three modules at one time. The central unit houses a LED pointer and an integrated camera system for fast and accurate contour cutting mark recognition.

Vacuum Pump and Selector

The vacuum pump with sound absorber holds the material in place during the job while the selector adjust the vacuum automatically to match the working area.

The powerful tangential module offers a vertical force of 10kg and corresponds to a wide range of matching tools. Each of the many and varied tools have a barcode ID that ensures automatic recognition and parameter settings.

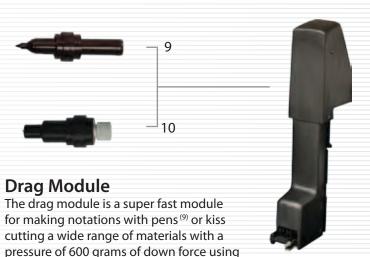

Routing Module

The router module is capable of milling most widely used solid boards in the graphic and sign industry, such as hard foam PVC, acrylic and aluminium covered boards. The router also includes a vacuum cleaning kit to take away the chips and dust (vacuum cleaner is an optional accessory).

Tools available for the Tangential Module

For each application, a corresponding tool can be installed onto the tangential module.

- 1. The **Kiss Cutting Tool** is able to kiss cut the most demanding roll materials with incredible force and accuracy.
- 2. The **Single Edge Cutout Tool** is designed for detailed cutting through materials up to 6mm in depth.
- 3. The **Double Edge Cutout Tool** ensures minimal wear when cutting through tough materials up to 5mm in depth.
- 4. The **Heavy Duty Cutout Tool** is suitable for cutting through thicker materials up to 15mm in depth.
- 5. The **Creasing Wheels** are designed in several radius sizes and depth configurations to create folds in a variety of materials.
- 6. The **V Cut Tools** are designed in several angles to allow a v shaped groove to be cut out of thick.
- 7. The **Electronic Oscillating Tool** is designed for cutting through thick materials up to 10mm in depth.
- 8. The **Pneumatic Oscillating Tool** is designed to cut through thicker, stronger and tougher materials up to 25mm in depth.

a drag knife (10).

One machine, many functions.

No other machine can match the versatility and adaptability of the Summa F Series. Its heavy duty construction, accuracy and multi-function head allows you to install up to three tools simultaneously from a wide range of options making countless applications possible. Since the tools and modules can be added at any time upgrades are easy and cost-effective.

Tangential Module

The powerful tangential module offers a vertical force of 10kg and horizontal force of 20kg and corresponds to a wide range of matching tools. Each of the many and varied tools have a barcode ID that ensures automatic recognition and parameter settings. Also multiple Tangential modules can be added into the multi-function head, to allow multiple jobs to be assigned to a single machine, such as creasing and cutting without having to remove modules.

1. Kiss Cut Tool

With mechanically controlled knife pressure, this tool is specifically designed for kiss cutting materials down to their liner up to 1.2mm thick. This tool also includes an adjustable nose piece for precise depth control.

ideal for cutting

banner vinyl sandblast material

blades

390-354 - Tangential Knife 36° Max cutting thickness - 0.25mm

390-551 - Tangential Double Tip Knife 36° Max cutting thickness - 0.8mm

2. Single Edge Cutout Tool

The single edge cutout tool is designed for detailed cutting through materials up to 6mm in thickness. A spring loaded gliding disc permits cutting of very precise details and can be fixed at set depth.

Drag Module

The drag module is a super fast module for making notations with pens or kiss cutting a wide range of materials with a pressure of 600 grams of downforce using a drag knife. Identical to the tangential module multiple drag modules can be added into the multi-function head to allow both kiss cutting and drawing completed without having to remove modules.

9. Drag Knife Tool

The drag knife tool is specifically designed for fast kiss cutting a wide range of materials. With 600 grams of force this is ideal for cutting though a wide range of adhesive vinyls.

ideal for cutting

paper < 200gsm

Universal pen holder - black accepts pen/pencils from 6.5mm to 10mm in diameter

Universal pen holder - copper accepts pen/pencils from 9.5mm to 11mm in diameter

Routing Module

The routing module on the Summa F Series has a 1 kW motor capable of handling most solid boards in the graphic and sign industry. Hard foam PVC, acrylic and aluminium covered foam boards but also other materials like wood and MDF can be processed.

Depending of the installed bit diameter, material type and material thickness, the maximum routing speed varies. The router module comes complete with a vacuum cleaning kit to take away unwanted chips and dust. The kit includes a brush assembly, host and mounting pole (gantry). The vacuum cleaner is an optional accessory.

The router module for the F Series allocates slot 2 & 3 of the head. Slot 1 remains free for another tool. Of course the module can be easily attached to the mounting pole when not in use, making the two slots available again for other modules and tools.

The routing module is compatible with (existing) installations with 3 phase power connection. SummaFlex and SummaFlex Pro can drive the router without the need to purchase any additional software upgrades.

SummaFlex

SummaFlex is a front end application with job preparation, post processor and import plug-ins for CAD and illustration software (e.g. Illustrator and CorelDRAW). The software integrates the F Series perfectly into your workflow needs. SummaFlex is the ideal link between your design station, RIPStation, printers and cutting devices. Once the workflow is set, macros automate the process. Consequently, the operators handling before starting the next job is reduced to a minimum as well as the downtime of the table.

SummaFlex Pro has all of the features of the standard version plus support for optical camera recognition, allowing for maximum flexibility in positioning registration marks with increased accuracy when contour cutting.

Camera recognition

The recognition process, localization of the registration marks and the process itself can be tracked in the camera preview window.

All kind of compensations and marks, which occur in everyday practice are with SummaFlex Pro manageable - no matter whether film, textiles, cardboard,

Barcode

Jobs can be opened using a barcode, which is provided with pre-defined output profiles.

Instead of looking for a job in the file system, only the barcode is scanned. Then, the appropriate job is loaded on the work area and can be given out immediately.

Sorting

For minimizing output time it is critical in which order objects are handled. SummaFlex has the possibility to determine start (S) and end (E) of a vector and order of processing.

Traverse path can be simulated for each layer before output. Simulation speed can be adjusted continuously.

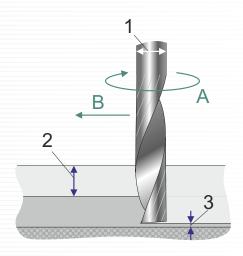

Aim is to shorten the traverse path. A base sorting after selection of main direction is done by SummaFlex itself. Improvements can be done at any time and validated with a new simulation.

Milling

With the interactive milling function, any change in tool diameter and rotation is performed immediately and shown on the working area. The milling objects are displayed with transparent fill and full-colored radius correction. At every scaling of the milling objects a recalculation is performed.

Embossing/engraving: The to be cleared out area is provided with milling paths in a hatch or island pattern, optionally with pocket connection where the tool is not being raised.

The milling process can occur at multiple depths. All milling paths are automatically created and displayed - the tool diameter is taken into account.

Axis Control software gives you full control over Summa's cutting table at your fingertips. The optimised design for touch screen makes Axis Control the optimum interface for the machine operator. With the supplied wireless controller, the operator is free to move around the table while changing basic settings and is included free of charge with the Summa F Series.

Extention Tables & Basket

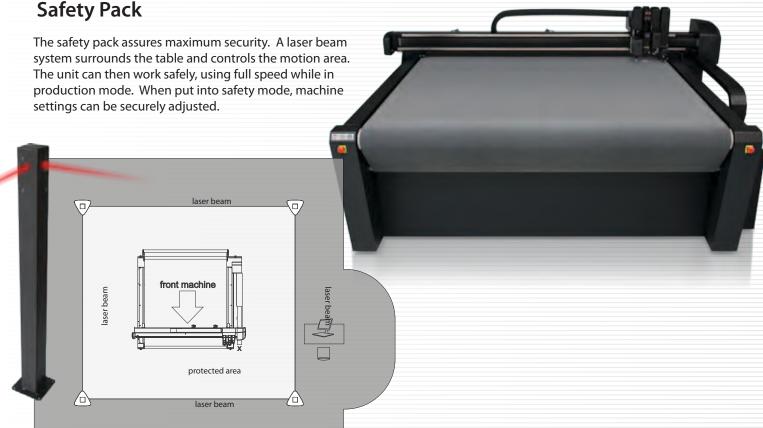

The sturdy Extention Tables can be placed in front and in the back of the table and adjusted to the correct height. Board material, several times longer than the F1612 working area, can be processed this way in combination with the conveyor belt system. The tables can also be used to place the next job in the queue and post process the previous job. Not in use, the tables can be folded to take minimal

The Basket is a handy tool to capture the cut-out samples and or waste material, keeping the workspace clean. It can capture several metres of material. The Basket is mounted on sturdy rollers casters so it can be easily moved around. Magnets keep the trolley in position when placed in front of the table. The front part can be tilted so the table is easily accessible for the operator.

The basket can be taken out to carry and idle it completely.

Technical Specifications

Model	F1612
Dimensions	2350mm x 1940mm x 1100 mm(without roll support) 92.5" x 76.3" x 43.3" (without roll support)
Media width	Up to 65" (1650mm)
Cutting area	1600mm (63") wide x 1200mm (47.2") long Up to 50m (164ft) long in multi panel
Repeatability	Within + /- 0.05mm on plots
Accuracy	0.05% of move or 0.05mm whichever is greater
Speed	Up to 1000mm/sec (39.4"/sec)
Acceleration	Up to 1G
Maximum Allowed Forces	Vertical: 200 newton Horizontal: 200 newton
Connectivity	USB 2.0
Requirements	3 Phase 230V or 3 Phase 400V+N
Standard Solution includes	F Series Flatbed Cutter Vacuum Pack: (1.3Kw pump, Sound Absorber, Switching Valve) Safety Pack: (Four Pole Laser Beam Systems) Camera System Axis Control Software Remote Controller with charger and USB Bluetooth Drag Module
